Server configuration

Parameter name	Value
affinity I/O mask	0
affinity mask	0
affinity64 I/O mask	0
affinity64 mask	0
Allow cross db ownership chaining	0
Allow INSERT into a Hadoop external table	0
Allow recursion for server level triggers	1
Allow remote access	1
Allow the use of the REMOTE_DATA_ARCHIVE data access for databases	0
Allow triggers to be invoked within triggers	1
Allow updates to system tables	0
Allows execution of external scripts	0
Automatic soft-NUMA is enabled by default	0
Blocked process reporting threshold	0
c2 audit mode	0
CLR user code execution enabled in the server	1
Common Criteria compliance mode enabled	0
Configure SQL Server to connect to external Hadoop or Microsoft Azure storage blob data sources through PolyBase	7
Configure SQL Server to encrypt control and data channels when using PolyBase	1
cost threshold for parallelism	5
Create DTC transaction for remote procedures	0
cursor threshold	-1

DB connection timeout for full-text protocol handler (s)	60
Dedicated Admin Connections are allowed from remote clients	0
Default fill factor percentage	0
default full-text language	1033
Default hash bucket count for the access check result security cache	0
default language	0
Default quota for the access check result security cache	0
Disallow returning results from triggers	0
Enable checksum of backups by default	0
Enable compression of backups by default	0
Enable or disable Ad Hoc Distributed Queries	0
Enable or disable Agent XPs	1
Enable or disable command shell	0
Enable or disable Database Mail XPs	0
Enable or disable EKM provider	0
Enable or disable Ole Automation Procedures	0
Enable or disable Replication XPs	0
Enable or disable SMO and DMO XPs	1
Enable or disable the default trace	1
Enables contained databases and contained authentication	1
Max number of full-text crawl buffers	100
Max number of full-text notifications buffers	100
Maximum crawl ranges allowed in full-text indexing	4
maximum degree of parallelism	0
Maximum estimated cost allowed by query governor	0
Maximum recovery interval in minutes	0
Maximum size of a text field in replication.	65536
Maximum size of server memory (MB)	2147483647
maximum time to wait for query memory (s)	-1
Maximum worker threads	0
Memory for index create sorts (kBytes)	0
minimum memory per query (kBytes)	1024
Minimum size of server memory (MB)	0
Network packet size	4096
Number of locks for all users	0
Number of open database objects	0

Number of reserved full-text crawl buffers	0
Number of reserved full-text notifications buffers	0
Number of user connections allowed	0
Priority boost	0
Recovery policy for DTC transactions with unknown outcome	0
remote login timeout	10
remote query timeout	600
scan for startup stored procedures	0
set working set size	0
Sets the FILESTREAM access level	0
show advanced options	0
Tape retention period in days	0
Transform noise words for full-text query	0
two digit year cutoff	2049
Use precomputed rank for full-text query	0
User mode scheduler uses lightweight pooling	0
user options	0
When this option is set, plan cache size is further reduced for single-use adhoc OLTP workload.	0

SSRS

Reports

List of all reports

Reports

Name	Description
Company Sales	Adventure Works sales by quarter and product category. This report illustrates the use of a

	matrix data region that provides drilldown from summary data into detail data by showing and hiding rows. This report also illustrates the use of background images.
Customers_Near_Stores	Purpose: Drillthrough report from store markers in Sales_by_Region_2008R2. Displays information about customers who live within the specified number of miles from a store. The store geolocation is a String parameter that contains a Well Known Text (WKT) value.
Employee_Sales_Summary	Purpose: Summary report. Displays year over year sales for all categories, for individual categories, and for quotas. Includes charts (line, sparkline, column with scale breaks, databar), tablix (toggle rows, row group, indicators at table and group level), group and report variables, rectangle containers, shared datasets, shared data source, custom code for chart line color, bookmarks, drillthrough action, multivalue parameters, and parameters to control conditional visibility of text boxes and toggle rows.
Product Catalog	Adventure Works full product catalog with pictures. This report illustrates the use of embedded images, database images, page breaks, page footers, tables, conditional formatting, and a document map.
Product Line Sales	Adventure Works top five sales people and stores. This report illustrates a dataset with queries containing the TOP clause. It also illustrates the use of tables, charts, parameters, calculated fields, and drillthrough links.
Sales Order Detail	Detail of an individual Adventure Works order. This report can be accessed as a drillthrough report from the Employee Sales Summary and Territory Sales drilldown report. This report illustrates the use of lists, tables, parameters, and expressions.
Sales Reason Comparisons	Shows sales reason comparison data from an Analysis Services cube. Also illustrates the use of a multivalued parameter. The Sales Reason Comparisons report requires SQL Server Analysis Services and the AdventureWorks Analysis Services database.
Sales_by_Region	Purpose: Map report. For each state, displays sales totals for individuals, sales totals for reseller stores, and store locations. Includes the US map from the map gallery, analytical data from a dataset, polygon layer (one for each state), polygon fill for no sales, polygon color rules based on individual sales, markers for stores, marker colors based on store sales, marker drillthrough action, multiple map titles and legends, and use of Lookup function.
Store_Contacts	Purpose: Subreport. Displays store contact information. Used in Sales_Order_Details_2008R2 to display multiple store contacts. Includes page header and footer items that are not included when the report is rendered as a subreport.
Territory Sales Drilldown	Adventure Works sales by territory. This report drills down through salesperson and order number with drillthrough to individual orders. This report illustrates the use of a table data region that provides drilldown from summary data into detail data by showing and hiding rows. This report also illustrates the use of drillthrough links and conditional formatting.

Employee_Sales_Summary

Name	Value
Author	Mary Lingel MSFT
Auto refresh	0
Description	Purpose: Summary report. Displays year over year sales for all categories, for individual categories, and for quotas. Includes charts (line, sparkline, column with scale breaks, databar), tablix (toggle rows, row group, indicators at table and group level), group and report variables, rectangle containers, shared datasets, shared data source, custom code for chart line color, bookmarks, drilthrough action, multivalue parameters, and parameters to control conditional visibility of text boxes and toggle rows.

Territory Sales Drilldown

Name	Value
Author	
Auto refresh	0
Description	Adventure Works sales by territory. This report drills down through salesperson and order number with drillthrough to individual orders. This report illustrates the use of a table data region that provides drilldown from summary data into detail data by showing and hiding rows. This report also illustrates the use of drillthrough links and conditional formatting.
